

Heuchera 'Caramel'

'Caramel' Coral Bells

DESCRIPTION

'Caramel' is a vigorous, clump-forming coral bells cultivar that features unique apricot foliage and light pink flowers.

The lobed, rounded leaves form a basal mound (to 8" tall) which may spread to 20" wide.

Leaves emerge gray-red in spring and mature to golden-yellow green (apricot/caramel) by summer.

Tiny, light pink flowers appear in spires in early summer on slender stems rising above the foliage mound, typically to 18" tall.

QUICK FACTS

Plant Height: 12-18"

Plant Spread: 12-18"

Hardiness Zone: 4-8

Flower Color: Light pink

Sun/Light Exposure: Full sun to part shade

Bloom Time: June and July
